Master of Science Program in Computational Science and Engineering (CSE SM)

The CSE SM program is designed with a common core that serves science and engineering disciplines, and an elective component that focuses on particular applications. Students must complete coursework distributed as described below (F = course offered fall semester; S = course offered spring semester). Please consult the MIT Subject Listing (http://student.mit.edu/catalog/index.cgi) for subject descriptions, schedules, and additional details.

Core Subjects (3 courses / 36 units)*
Students are required to take three of four core subjects designed to provide foundation materials needed for the study of more advanced elective topics. The core subjects are chosen from the following:

- 6.337[J] / 18.335[J] Introduction to Numerical Methods (S)

Restricted Electives (2 courses / 24 units)†
Students choose two graduate level restricted electives (REs) from the following list of specialized subjects that have computational themes and related components, and that are aligned with the program’s educational mission:

- 1.124[J] / 2.091[J] Software and Computation for Simulation (F)
- 1.125 Architcting & Engineering Software Systems (F)
- 1.545 Atomistic Modeling & Simulations of Materials & Structures (F)
- 1.583 Topology Optimization of Structures (F)
- 1.723 Computational Methods for Flow in Porous Media (F)
- 2.089[J] / 1.128[J] Computational Geometry (S)
- 2.098 Introduction to Finite Element Methods for Partial Differential Equations (S)
- 2.168 Learning Machines (S)
- 2.29 Numerical Fluid Mechanics (S)
- 3.320 Atomistic Computer Modeling of Materials (F)
- 4.450[J] / 1.575[J] Computational Structural Design and Optimization (F)
- 4.453 Creative Machine Learning for Design (S)
- 6.231 Dynamic Programming and Reinforcement Learning (S)
- 6.251[J] / 15.081[J] Introduction to Mathematical Programming (F)
- 6.252[J] / 15.084[J] Nonlinear Optimization (S)
- 6.256 Algebraic Techniques and Semidefinite Optimization (S)
- 6.337[J] / 18.335[J] Introduction to Numerical Methods (S)
- 6.435 Bayesian Modeling and Inference (S)
- 6.438 Algorithms for Inference (F)
- 6.482 Modeling with Machine Learning: from Algorithms to Applications (S)
- 6.838 Shape Analysis (S)
- 6.867 Machine Learning (F)
- 6.869 Advances in Computer Vision (S)
Restricted Electives Cont. (2 courses / 24 units)*†

- 9.660 Computational Cognitive Science (F)
- 10.551 Systems Engineering (S)
- 10.552 Modern Control Design (F)
- 10.554 [J] / 2.884 [J] Process Data Analytics and Machine Learning (F)
- 10.557 Mixed-integer and Nonconvex Optimization (S)
- 10.637[J] / 5.698[J] Quantum Chemical Simulation (F)
- 12.515 Data and Models (F)
- 12.521 Computational Geophysical Modeling (F)
- 12.620 Classical Mechanics: A Computational Approach (F)
- 12.714 Computational Data Analysis (S)
- 12.805 Data Analysis in Physical Oceanography (S)
- 12.850 Computational Ocean Modeling (S)
- 15.077[J] / IDS.211[J] Statistical Learning and Data Mining (S; Cannot be used if taken Fall 2015 or after & credit also received for 6.867)
- 15.083 Integer Programming and Combinatorial Optimization (S; Sloan bidding process required)
- 16.110 Flight Vehicle Aerodynamics (F)
- 16.413 Principles of Autonomy and Decision Making (F)
- 16.930 Advanced Topics in Numerical Methods for Partial Differential Equations (S)
- 16.940 Numerical Methods for Stochastic Modeling & Inference (F)
- 18.338 Eigenvalues of Random Matrices (F)
- 18.369 Mathematical Methods in Nanophotonics (S)
- 22.15 Essential Numerical Methods (F; first ½ of term)
- 22.212 Nuclear Reactor Analysis II (F)
- 22.213 Nuclear Reactor Physics III (S)
- 22.315 Applied Computational Fluid Dynamics and Heat Transfer (S)

Unrestricted Elective (1 course / 12 units)*

Students may choose any graduate-level 12-unit subject to satisfy the unrestricted elective (UE) component.

*Courses that can be repeated for credit cannot be used to satisfy multiple CSE SM requirements.

Thesis (36 units)
Concurrent with coursework, students conduct thesis research leading to the writing of a master’s thesis under the supervision of a faculty advisor. Students must register for thesis research credit (CSE.THG or CDO.THG) each term they are conducting thesis research as well as the term immediately prior to graduating, e.g. IAP for February degree list and summer term for September degree list. Thesis research progress will be assessed on a continuing basis with students receiving either a ‘J’ / ‘satisfactory’ or ‘U’ / ‘unsatisfactory’ at the end of each term. Upon completion of the final thesis students will receive a traditional letter grade; this letter grade will appear by itself in the term the thesis was completed and next to the J or U in prior terms (e.g. J/A).
English Language Proficiency
All incoming CSE SM students are required to take the MIT Graduate Writing Exam (GWE). **Students who do not receive a score of 75 or higher are required to take 21W.794 Graduate Technical Writing Workshop.** Students may choose to take the workshop with P/D/F grading (rather than an A-F letter grade), however they must receive a P grade.

Academic Performance
CSE SM students are expected to maintain a cumulative grade point average (GPA) of at least 4.5 out of 5.0. If a student's term GPA is at or below 4.0 for two sequential terms, if an unsatisfactory grade ('U') is given for thesis research, or if a grade of C or lower is given in any subject, a warning from the CCSE directors will be issued to the student. All situations are handled on a case-by-case basis, and additional action(s), including a Vice Chancellor’s warning up to denial of further registration, may be taken if necessary.

†Previously Approved REs No Longer Included
- 1.204 Computer Modeling: From Human Mobility to Transportation Networks (no longer offered)
- 2.092 / 2.093 Finite Element Analysis of Solids and Fluids I (no longer offered)
- 2.094 Finite Element Analysis of Solids and Fluids II (no longer offered)
- 2.37 Fundamentals of Nanoengineering (cannot be used if taken Spring 2020 or later)
- 6.673 Introduction to Numerical Simulation in Electrical Engineering (no longer offered)
- 6.864 Advanced Natural Language Processing
- 10.34 Numerical Methods in Chemical Engineering (cannot be used if taken Fall 2019 or later)
- 15.062[J] / IDS.145[J] Data Mining: Finding the Data and Models that Create Value (cannot be used if taken Fall 2019 or later)
- 15.074 Predictive Data Analytics and Statistical Modeling (no longer offered)
- 15.082 Network Optimization (no longer offered)
- 18.0851 Computational Science and Engineering I (cannot be used if taken Fall 2018 or later)
- 18.0861 Computational Science and Engineering II (cannot be used if taken Fall 2018 or later)
- 22.107 Computational Nuclear Science and Engineering (no longer offered)
